

Metro Ticket Generating System

Customer Journey Map — ServiceNow-based digital metro ticket booking

Date	5 September 2026	Team ID SWUID2026190411	Project Name	Metro Ticket Generating System in ServiceNow
------	------------------	----------------------------	--------------	--

JOURNEY STAGE	ENTICE Become aware / decide to book	ENTER Open the booking process	ENGAGE Complete booking and payment	EXIT Receive and use the ticket	EXTEND After the journey
Steps	Discover metro ticket booking Passenger decides to use digital booking instead of waiting at a counter.	Open Book A Metro Ticket Passenger opens the ServiceNow catalog item and starts a ticket request.	Enter journey details & submit Select Starting From, Going To, journey type, passenger count, payment mode, then place the order.	View QR ticket System shows the digital QR code and ticket information for gate scanning.	Use / retain digital ticket Passenger keeps the QR ticket for travel and can refer to the ticket/request information.
Interactions People • Places • Things	Passenger sees the ServiceNow portal/catalog and chooses metro ticket booking.	ServiceNow Catalog Item; station reference fields; passenger selection.	Fare fields; payment selection; Order Now; automated fare/QR logic.	QR popup/widget; mobile screen; metro entry gate / station staff.	Ticket/request record and QR information; station staff may verify the ticket.
Goals & motivations Primary goal at each step	Help me book a metro ticket quickly without waiting in a queue.	Help me select the correct source and destination and start booking easily.	Help me get the correct fare, choose payment, and complete booking with minimal effort.	Help me receive a valid digital ticket and show it easily at the metro gate.	Help me retain my ticket information and complete my journey smoothly.
Positive moments Enjoyable / productive / motivating	Digital booking reduces dependency on physical counters and paper tickets.	Reference-based station selection makes source/destination entry easier.	Automatic fare calculation and digital payment options reduce manual work.	QR ticket is convenient, fast to present, and supports contactless checking.	Digital record can be referred to when needed; less paper handling.
Negative moments Frustrating / confusing / time-consuming	Passenger may not know where to start if the booking option is not obvious.	Wrong source/destination selection can lead to an incorrect ticket.	Payment failure or unclear fare can interrupt the booking process.	QR may be difficult to scan if the display is unclear or unavailable.	Passenger may have difficulty finding old ticket details if records are not easy to access.
Areas of opportunity How might we make each step better?	Provide a clear Metro Ticket entry point and simple instructions on the portal.	Add validation to prevent selecting the same/invalid stations and make station search easier.	Make fare calculation transparent; show total amount before submission and give clear payment feedback.	Provide a clean QR display with ticket details and a clear scan instruction.	Provide an easy way to view ticket/request history and reuse relevant journey information.

Scenario: Passenger discovers the digital metro ticket service → selects stations and journey details → completes payment/booking → receives a QR ticket → uses the digital ticket for metro entry.
