

Project Development Phase

Model Performance Test

Date	5 September 2026
Team ID	SWUID2026190411
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	10 Marks

Model Performance Testing:

The template asks for model-performance metrics and model-tuning information. The Metro Ticket Generating System in ServiceNow does not contain a regression or classification machine-learning model. Therefore, model-specific values such as MAE, MSE, RMSE, R^2 score, confusion matrix, accuracy score and classification report are not applicable to this project.

Applicable System Performance Measures

Since model-performance metrics are not applicable, the following application-level performance measures are relevant to the implemented project:

S.No.	Performance Measure	Expected Performance
1	Fare Calculation Response	Fare should be calculated promptly when the user changes route, journey type or passenger count.
2	Form Response	The ServiceNow booking form should respond normally to user selections and validation.
3	Ticket Submission	A valid completed booking should be submitted successfully without application errors.
4	QR Generation Response	The QR-code generation request should return a QR image that can be displayed to the user.
5	Booking Flow Reliability	The complete flow from station selection through ticket generation should work consistently.

Conclusion: The Model Performance Test template is not directly applicable to the Metro Ticket Generating System because no machine-learning model is used. The appropriate evaluation for this project is functional and application-performance testing.
